PROFESSIONAL EXPERIENCE

2018 – Today **Appsfactory GmbH, Leipzig**
Project manager & Teamlead

Appsfactory is one of the fastest growing mobile agencies specialized in the development of apps. Since launching in October 2009 the company realized over 600 software projects for more than 30 clients. At Appsfactory I am responsible for a team of 12 employees, including iOS-, Android- and .net developers, quality consultants and UX/UI-designers and already worked for various clients such as Daimler, Vattenfall, Vonovia, Flaschenpost or Beurer.

2013 – 2018 **Die Coder GmbH, Leer**
Founder & Chief Executive Officer

The "Die Coder GmbH" is developing individual business-, mobile- and web-based applications to optimize and display internal business processes on mobile devices. Software from Die Coder is used by multinational corporations within the car- and tire industries and textile retail trade companies among others. As founder I started on developing these applications on my own, but got into the human resources, product- and projectmanagement as the company grew. I left the company on my own wish in 2018 and sold my shares to my cofounder, who later merged with WW Consulting GmbH and closed the company.

2012 – 2013 **neusta Destination.Solutions GmbH, Bremen**
PHP Developer

The agency called itself "Internetagency for touristic solutions". With my experience within the accommodation search of BestFewo I worked at an own product for touristic destinations, which can seamlessly be placed within their websites. With this product visitors were able to book a hotel or holiday flat directly at the destinations website. neusta and BestSearch Media companies were partners at this time.

2010 – 2012 **BestSearch Media GmbH, Potsdam**
PHP Developer

BestSearch Media is the operator of BestFewo.de, the biggest german website for holiday flats. I worked at the development of the search-algorithm and the API with the flat-administration. I was in charge of the API, which runs data imports fully automatic twenty-four-seven. I took care of the core development of the company-own framework and managed the set-up of new APIs with partners. I also created concepts and developed further automation of technical processes.

2006 – 2013 **Internetprojekte markus.gubitZ, Leer**
Freelancer
